

Fact Sheet

GREVILLEA:

Grevilleas are a very versatile and diverse group of plants. They are fast growing, flower for long periods, bird attracting, and come in a great range of colours and leaf types.

Soil Requirements:

Grevilleas need very free drainage; sandy soils are ideal. For heavier soils you can improve drainage by adding Gypsum or compost. Raised garden beds are best for heavy clay.

General Maintenance:

Prune lightly and regularly, generally after a flush of flowers.. Use a native slow release fertiliser through spring and autumn. Over fertilising can do more harm than good. In dryer times, your Grevilleas will appreciate some occasional deep watering. Most Grevilleas need full sun. They will survive in a shadier position, but become leggy and will not flower well.

Grevilleas are generally very hardy and easy plants to grow. With a little care, they are even better. Wirreanda Nursery keeps a wide range of Grevillea varieties and we have listed some below that are normally in stock. Please note that the sizes quoted are meant only as a guide, as growing conditions will affect the ultimate size of the plant.
